

Configuration software “Motion Editor”

- **Intuitive user interface**
- **Individual short-cuts**
- **Reduced start-up procedure**

Intuitive and easy software which can be used without reading complex operation manuals is the goal of each good software application and are becoming more important in daily manufacturing routine. In line with its continuous innovation, mta automation ag redesigned process robots and technology as well as software to be in line with today's high demanding customer requirements for soldering and dispensing projects.

Soldering

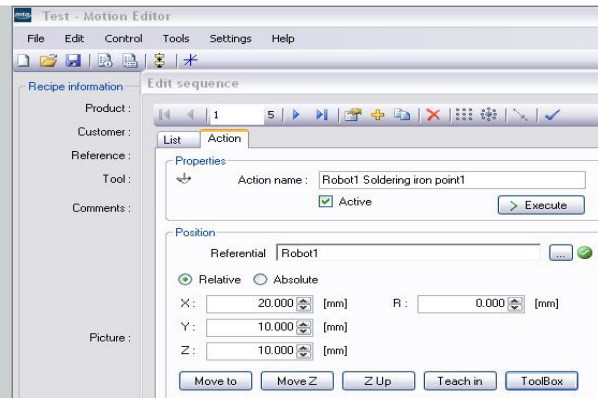

Motion Editor

The software configuration tool has been redesigned and optimized to reach today's requirements for customers' soldering or dispensing processes.

The most important innovations are as follows:

- Configuration simulation including cycle time estimation for the entire process or each single action
- “Most used functions” can be configured individually as short-cuts assigned to F-buttons
- Parallel use of track pad and number block on the keyboard
- Automatic backup of stored configuration files
- Language change capable without restarting application
- Additional languages can be implemented easily
- Print-out of the process parameters

Dispensing

- Easy redefinition of the reference point after machine maintenance
- Common positioning of X, Y, Z, and R axis for time efficient positioning
- Configuration can be written offline
- Reduced startup procedure

Motion Editor runs under WindowsXP embedded, professional and Vista and is available on all new machines, at no extra cost.

Due to the new integrated technology and data base structure, no upgrade of past delivered equipment is possible.
